Disclosure Report as of 31 December 2021

pursuant to Part 8 of the Capital Requirements Regulation (CRR) / Disclosure by Institutions (Pillar 3)

Empowering
Communities to Progress.

Bank Austria
Member of UniCredit

Disclosure of UniCredit Bank Austria AG as of 31 December 2021

UniCredit Bank Austria AG („Bank Austria“) is regarded as large subsidiary of UniCredit S.p.A. pursuant to Article 13 (1) of EU Regulation No. 575/2013 ("CRR") and therefore is subject to the disclosure requirements of CRR (Article 13 (1) in connection with Part 8 CRR).

By means of this disclosure report, Bank Austria fulfills these information requirements on the basis of Bank Austria subgroup. These reports are being published on an annual (with year-end data) on the website of Bank Austria (www.bankaustria.at/en) at „About Us “ / „Investors“ / „Disclosure“.

The information required by Article 437 b) and c) CRR – i.e. a description of the main features of Bank Austria’s capital instruments and their final terms – are being published separately as well on the website of Bank Austria at „About Us “ / „Investors“ / „Disclosure“.

Article 450 CRR requires disclosure of Bank Austria’s remuneration policy and practices for all staff categories if their roles have a major impact on the risk profile of the bank. This information is also disclosed in a separate report which is done annually (as of year-end) and is published in the following year also on the website of Bank Austria at „About Us “ / „Investors“ / „Disclosure“.

Disclosure of capital requirements (Article 438 CRR)

The capital planning, budgeting and monitoring processes within UniCredit Bank Austria are carried out by the responsible local functions and are in line with the respective UniCredit Holding guidelines.

The Capital Requirements Regulation (CRR) and the Capital Requirements Directive (CRD IV) for the implementation of Basel 3 in the European Union were published in the EU Official Journal on 27 June 2013. The legal framework replaces Capital Requirements Directives 2006/48/EC and 2006/49/EC and came into force in Austria on 1 January 2014. The EU banking package introduced further, essential changes to the Basel 3 framework with regards to CRR (→ „CRR II") and CRD IV (→ „CRD V"). It was published in the EU Official Journal on 7 June 2019 and entered into force on 27 June 2019.

Basel 3 framework (2019) asks for stricter capital requirements with a minimum of Common Equity Tier 1 Capital of 4.5%, Total Tier 1 Capital of 6% and Total Capital of 8% of RWAs.

In addition, all banks are required to hold a capital conservation buffer consisting of Common Equity Tier 1 Capital of 2.5% on top of the new minimum requirements. This will lead to an effective total requirement of 7% Common Equity Tier 1 Capital, 8.5% Tier 1 Capital and 10.5% Total Capital.

Furthermore, Member States can set an additional buffer requirement to dampen excess lending growth (counter-cyclical buffer up to 2.5%). According to legislation (*Kapitalpuffer-Verordnung* / KP-V) and starting with 1.1.2016, the countercyclical buffer for Austrian exposure was set to 0%. In addition, the authorities can set systemic risk buffers (SRB) and capital surcharges for systemically important banks. According to CRD V, the two buffers (systemic risk buffer and the surcharge for systemically important banks) have to be applied cumulatively starting with June 2021. The authorities may also impose a sectoral risk buffer.

The SRB for UniCredit Bank Austria Group is currently set at 1% and the surcharge for systemically important banks is 1%, they are applied cumulatively starting with June 2021.

UniCredit Bank Austria AG shall at all times meet, on an individual basis and on a subconsolidated basis a total SREP capital requirement (TSCR) of 9.75% (which includes a Pillar 2 additional own funds requirement of 1.75%, to be held in the form of 56.25% of Common Equity Tier 1 (CET1) capital and 75% of Tier 1 capital, as a minimum).

In Austria, the BRRD II was transposed into national law by amending the Bank Recovery and Resolution Act (*BaSAG*) as published on 28 May 2021.

The MREL determination, based on the "Total Liabilities and Own Funds" (TLOF), was cancelled and replaced by the calculation based on RWA (TREA) and on the Leverage Exposure (LRE).

Regulatory intermediate MREL target are binding starting with 1 January 2022.

The CET1 ratio transitional as of 31 December 2021 decreased vs. previous year by -327bps to 16.83%. The main driver was the RWA increase (€+4.8bn) mostly impacted by the introduction of the new IRB PD model. CET1 capital decreased by €-0.2bn, driven partly by effects regarding DBO (pension obligations), debt securities and DTA (deferred tax assets). Due to the issue of additional tier 1 capital of €0.6 bn, tier 1 capital at 31 December 2021 increased by €0.4bn y/y.

Bank Austria continues to have a solid capital base to meet the own funds requirements pursuant to Art. 92 CRR / Art. 129 CRD IV.

With reference to EU law (CRR, CRD IV) the following applies:

Should there be a reference to stipulations of the EU Regulation “CRR” as mentioned in this document, the Regulation (EU) No. 575/2013 on prudential requirements for credit institutions and investment firms and amending the Regulation (EU) No. 648/2012, lastly amended by EU Regulation 2019/876 dated 7 June 2019, has to be applied.

Should there be a reference to stipulations of the EU Directive “CRD IV” as mentioned in this document, the Directive (EU) No. 2013/36 on access to the activity of credit institutions and the prudential supervision of credit institutions and investment firms, lastly amended by EU Directive 2019/878 dated 7 June 2019, has to be applied.

Internal Capital Adequacy Assessment Process (ICAAP)

Bank Austria deems as priority the activities of capital management and capital allocation based on the risks taken, with the aim of expanding business activities with respective value creation. Therefore, the capital and its allocation are of relevant importance in the definition of corporate strategies.

The ICAAP forms an integral part of the Pillar 2 requirements according to CRR. Maintaining an adequate level of capital is a core objective of Bank Austria, it is measured by the Risk-Taking Capacity (RTC). Bank Austria’s RTC calculates the economic risks across all relevant risk types and relates them to the available financial resources (AFR) which are held to cover such risks.

The risk side of the calculation serves to determine the economic capital requirement from unexpected losses with regard to credit, market, operational and other risks. The risk is calculated in a going concern approach and at a confidence level of 99.90%. The economic capital requirement is then related to the AFR, which are based on regulatory own funds and additional coverage positions available. The RTC is accounted for in the Risk Appetite Framework (RAF) of Bank Austria. The RAF defines, from a strategic perspective, the risk level that Bank Austria is willing to take on by setting limit, trigger and target for the respective Key Performance Indicators (KPIs). This setup enables management at any point in time to monitor the appropriateness and sufficiency of Bank Austria’s economic capital adequacy.

The management board and the risk committee are informed at least quarterly on the results of the risk taking capacity, showing also the development of the single components (economic capital, AFR). The calculation, monitoring and steering of the RTC forms a fundamental part of the management of risk and capital at Bank Austria.

30	**Total**	**36,220.0**	**31,464.3**	**2,897.6**

Compared to the end of 2020, the risk-weighted exposure assets (RWEAs) increased from €31.5 billion to €36.2 billion. The sharp year-on-year increase in credit risk is primarily due to the new IRB PD model introduced in the third quarter of 2021. Market risk decreased by €0.1 billion.

EU CR8 – RWA flow statements of credit risk exposures under the IRB approach (Art. 438 CRR)

(EUR million)

		a	b	
	Description	RWA amounts	Capital requirements	Comments
1	**RWAs as at the end of the previous reporting period**	**20,528.2**	**1,642.3**	
2	Asset size	787.7	63.0	1)
3	Asset quality	54.0	4.3

Disclosure of credit risk adjustments (Article 442 CRR)

In general, loans are divided into performing and non-performing loans. Performing loans are further divided into loans with impairment based on their one-year expected loss (Stage 1) and loans with impairment based on their lifetime expected loss (Stage 2) pursuant to IFRS 9. Non-performing loans comprise Stage 3.

„Non-performing" loans:

Non-performing loans are divided into the following categories according to UniCredit Group rules:

- **Bad loans:** credit exposures that are considered uncollectable to insolvent borrowers, even if insolvency has not been judicially ascertained. A workout scenario is assumed in respect of borrowers in this category. The impairment loss assessment is performed on an analytical basis respectively, for exposures below € 2 million, based on statistical methods.
- **Unlikely to pay**: risk exposures that do not qualify as "bad loans", but where it is unlikely that the borrower will meet its obligations (capital and/or interest) arising from the loan in full without measures being taken, such as the disposal of collateral, regardless of any days in arrears. For a loan placed in the category "unlikely to pay", there are not necessarily specific default criteria in place (non-performance of the payment obligation); rather, there are indications that a borrower may default. The impairment loss assessment is performed on an analytical basis respectively, for exposures below € 2 mn, based on statistical methods.
- **Past-due:** on-balance sheet exposures other than those classified as "bad loans" or "unlikely to pay" which have amounts that are more than 90 days past due or over limits for over 90 days. Such amounts are determined at the level of the individual debtor, taking into account the detailed rules of the relevant EBA Guideline (EBA/GL/2016/07).

If the criterion for allocation to a non-performing category expires due to the economic recovery of the customer, the customer is classified as performing after a good conduct period of at least 90 days (in the case of distressed restructuring, the period of good conduct is 12 months).

Credit exposures with retail scoring are assigned a rating of 7- after this period until behavioural scoring is determined. All other credit exposures are automatically set to unrated until a new rating is determined.

Performing loans:

- **Overdue performing loans**: risk exposures to borrowers with amounts already due at the reference date or with unapproved limits being exceeded that are between 1 and 90 days overdue and which do not fulfill any criteria to be classified in the categories „Bad Loans" or „Unlikely to pay"
- **Other exposures**: borrowers not included in the other categories.

Forborne exposure:

Forbearance measures are concessions made by a bank to a debtor facing or about to face difficulties in meeting its financial commitments. These may take the form of a modification of the terms and conditions of a contract that would not have been agreed if the debtor had not been in financial difficulties, or the form of total or partial refinancing.

Debtors that are classified as “forborne” are subject to special monitoring requirements and are to be clearly marked as such. Forbearance measures include, for example, a rescheduling agreement, renegotiated pricing at interest rates below the market level, the conversion of a partial amount of the loan into shares, or a reduction of the principal amount.

Forborne exposures can be classified in the categories “non-performing exposures” and “performing exposures” (stage 2 according to IFRS 9) as defined by the same EBA standards.

With reference to the assessments of impairment and provisions for forborne exposures, the accounting policies applied are the general criteria in accordance with IFRS 9 requirements.

The various state and cross-sector moratoria introduced in stages in 2020 were discontinued as of spring 2021. This means that special regulations, e.g. the EBA relief in connection with general moratoria, are also no longer applicable. The associated specific Bank regulations (e.g. for forbearance classification or the troubled debt test) have been withdrawn in favor of the pre-COVID-19 regulations. Also, no material cliff effect was observed in the portfolio with the expiration of the moratoria. By and large, special regulations have given way again to normal credit risk processes.

Description of methodology applied to determine write-downs

Bank Austria has implemented internal guidelines for the recording, administration and valuation of loans, which govern both value adjustments and write-offs or partial write-offs of loans.

The impairment model for showing expected credit losses is to be applied to all debt instruments that are shown at either “amortised cost” or “at fair value through other comprehensive income, in equity”, and also to off-balance sheet instruments such as guarantees and lending commitments.

Depending on the change in credit risk between the time of the initial recognition and the current credit risk on the valuation date, these instruments are categorised either in Stage 1, Stage 2 or Stage 3:

- **Stage 1** includes all newly added financial instruments, and those for which no significant increase in the default risk since the initial recognition has been determined and instruments with a low default risk ("low credit risk exemption" for transactions with an "investment grade" credit rating, (specifically, an IFRS 9 12-month probability of default of less than 30 basis points)).
- **Stage 2** includes instruments for which a significant increase in risk has been identified since the initial recognition, but in which there have been no failures yet, and are therefore classified as "performing", as well as instruments without a PD at the time of access.
- **Stage 3** is for the non-performing portfolio, which is made up of unusual risk positions pursuant to Article 178 of Regulation (EU) No. 575/2013.

The three-stage approach is applied for financial instruments within the framework of the impairment regulations of IFRS 9, which do not already feature an impairment at the time of acquisition or origin ("purchased or originated credit-impaired financial assets", POCI), which form a separate category in accordance with the provisions of IFRS 9.

For the definition of performing and non-performing, Bank Austria uses the same definition that is used for regulatory purposes.

The amount of expected credit losses to be recognised depends on the allocation of stages.

Impairment losses for Stage 1 and 2 (Performing Loans)

For Stage 1 instruments, a credit loss equal to the expected 12-month credit loss ("1-year ECL") is recognised. For Stage 2 and 3 instruments, on the other hand, a credit loss amounting to the lifetime credit loss expected ("lifetime ECL") is recognised. The credit risk parameters used are generally based on the regulatory IRB models and are adapted in relation to IFRS9-specific requirements (e.g. consideration of future-oriented macroeconomic information).

The stage transfer criteria (between Stage 1 and Stage 2) form a central component of the impairment regulations and determine when a significant increase in credit risk ("SICR") has occurred since initial recognition. These include both relative and absolute criteria.

The significant **criteria for a transfer from Stage 1 to Stage 2** include:

- **Quantitative transfer logic**: a relative comparison on a transaction basis between default probability (PD) at the reporting date and that at initial recognition using internal models. The threshold values are defined using a complex statistical procedure that takes into account the probability of default, the age and residual term of the loan (the variable residual term was re-recognised as part of the 2021 recalibration of the transfer criteria) and the historical default behavior of the segment in question. Each month, the probability of default as at the observation date is compared with the probability of default at the start of business. The comparison is based on the PD profile for the entire term of the transactions. The limit from which deterioration is considered significant is determined for each individual transaction, using a function which applies this PD at the time of the initial recognition as most important variable. The higher the PD is at the start of business, the lower the relative tolerated deterioration is, which leads to a shift into Stage 2. The functions are determined for various sub-portfolios and are calibrated differently. This calibration is based on the long-term rate of default, including the forbearance portfolio share and items where payment is delayed by at least 30 days. The quantitative calibration of the stage transfer criteria is designed to ensure that a corresponding share of the sub-portfolio will be classified as Stage 2 for average economic situations. This share may increase or decrease, depending on the respective economy. Transactions for which the probability of default has at least tripled (PD over the entire residual term) are classified as Stage 2 regardless of the function described above, as well as transactions with a probability of default of 20% or more (IRB PD).Conversely, all transactions with a PD below 30 basis points (12-month PD) are classified as Stage 1.
- **Qualitative criteria**: All quantitative criteria are supplemented by a number of qualitative criteria, any one of which will lead to a Stage 2 classification: "30-day arrears", "forbearance" and certain "watch list cases".

- **Stage upgrade**: If the PD of the transaction has improved sufficiently again by the next reporting date and no qualitative Stage 2 criteria apply, it is transferred back to Stage 1. However, a shift from Stage 2 to Stage 1 may only be made if the transaction would consistently have been assigned to Stage 1 on the previous three monthly reporting dates.
- **Special portfolios in Stage 2**: Foreign currency loans in the retail banking segment, taking into account the inherent risks since initial recognition in Stage 2.
- **Portfolios in Stage 1**: Internal transactions within the UniCredit Group are in Stage 1 unless individually assigned to Stage 2 at the transaction level.
- The **COVID-specific factors/criteria** that were added to the internal criteria in 2020 continued to apply in 2021.

Some of the above stage criteria were first introduced across the Group in the fourth quarter of 2021. The adjustments also resulted from a discussion with the ECB. The key adjustments include the introduction of a rule whereby a tripling of the probability of default must always lead to a Stage 2 classification, as well as transactions with a probability of default of 20% or more. These two changes have not led to any significant increases in impairments compared with the previous Group-wide stage transfer criteria, but they are a better match for the ECB's expectations in the European environment. Another adjustment was the introduction of a good conduct period such that an upgrade to Stage 1 is only permitted if the transaction would consistently have been assigned to Stage 1 on the preceding three monthly reporting dates. This ensures that a stage upgrade only gives rise to impairment reductions if they have been confirmed to be sustainable through this good conduct period. Finally, a further extension of the low risk credit exemption (LCRE) was introduced to cover all loans with a probability of customer default below 30 basis points (Stage 1 assignment). Overall, the effects leading to increases in impairments were predominant.

Impairment Losses for Stage 3 (Non-Performing Loans)

Stage 3 is assigned to the defaulted portfolio, the non-performing assets. Impairments are formed at customer level as follows, depending on the amount of the customer advances:

Specific write-downs

Customers with a total exposure of more than €2 million (based on Group of Connected Clients, GCC) are transferred to the restructuring management (NPE Operational Management & Monitoring) until there are first concrete indications of a possible default. In the event of these engagements, designated as "significant" due to the credit amount, the responsible restructuring manager calculates the impairment requirement on a case-by-case basis, for the first time when taking over the case and subsequently, on a quarterly basis. The calculation is based on weighted scenarios of expected future cash flows. The amount of impairment corresponds to the difference between the carrying amount of the loans and receivables and the present value of the expected cash flows (repayments and interest payments), discounted by the original effective interest rate.

For instruments with fixed interest, the underlying interest rate is constant over the term, while for instruments with variable interest, a recalculation is carried out depending on the contractual circumstances.

Portfolio-based specific provisioning method

UniCredit Bank Austria AG applies a parameter-based method for the calculation of a portfolio-based specific provisioning method ("*Pauschale Einzelwertberichtigung*" – *PEWB*) for defaulted assets grouped by similar credit risk characteristics and with no significant exposure (total exposure of less than €2 million) at the GCC (Group of Connected Clients) level. By decision of the restructuring management, customers who belong to a GCC over €2 million can also be allocated to this method, provided the individual customer exposure does not exceed €1 million. Depending on the customer segment, the amount of the exposure and collateral, the credit rating and the duration of the default are determined and recognised. The parameters used to calculate the loss rate are re-estimated and back-tested annually.
If necessary, the value adjustment can also be determined by means of a specific provisioning method.

Recovery periods are estimated on the basis of business and economic plans, as well as historical considerations and observations for similar business cases. Consideration is therefore given to the relevant customer segment, the type of loan agreement and the security in addition to other relevant factors that are appropriate for the determination.

For impaired instruments, forward-looking information is also taken into account based on the application of multiple scenarios, which, in the case of specific provisioning, make use of specific probabilities for each customer.

EU CQ1 - Credit quality of forborne exposures (Art. 442 CRR)

		a	b	c	d	e	f	h	i

The volume of forborne loans increased significantly in comparision with 31 December 2020. This is almost entirely driven by the granting of - COVID-19 pandemic-related - forbearance measures to non-financial institutions.

EU LRA – Disclosure on qualitative items

a	Description of the processes used to manage the risk of excessive leverage:
	Group Risk Appetite Framework represents the foundation for risk management within UniCredit Bank Austria Subgroup. This framework envisages comprehensive governance, processes, tools and procedures for the widespread management of risks. The leverage risk is included in the Group Risk Appetite Framework, therefore, the relevant procedures and resources are applied to this kind of risk. The leverage ratio is monitored both at the level of Bank Austria Group and material subsidiaries and reported to the relevant bodies as part of quarterly risk appetite monitoring. The development is assessed in terms of target, trigger and limit (the relevant parameters are defined annually in the risk appetite framework). The Group Risk Appetite process identifies the governance mechanism, managerial involvement and escalation process under normal and stressed operating conditions. The defined escalation process is activated at relevant organizational levels in order to ensure an adequate reaction when triggers or limits are breached.
b	Description of the factors that had an impact on the leverage ratio during the period to which the disclosed leverage ratio refers:
	Changes of Leverage Ratio between December 2020 and December 2021 were mainly driven by: - Increase of Leverage Exposure by €1.4bn due to an increase of SFTs (repo & reverse-repo transactions) of € 2bn, an increase of Derivative exposure by € 1.3bn, a decrease of Other Assets of € 1.8bn, as well as a decrease of Off-Balance exposure of € 0.1bn. - Increase of Tier 1 Capital by € 373m. Overall Leverage Ratio increased from 6.2% to 6.5%.

Disclosure of liquidity requirements (Art. 451a CRR)

Liquidity Coverage Ratio

The Liquidity Coverage Ratio (LCR), introduced by Basel 3 prudential regulation, is a short time indicator which aims to ensure that credit institutions maintain an adequate liquidity buffer to cover the net liquidity outflows under severe conditions of stress over a period of 30 days.

The regulatory framework applied is represented by:

- with reference to the requirements to be met:
  - CRR Article 412 “Liquidity coverage requirement”; in particular, the requirement to be met by all institutions is 100%;
  - Commission Delegated Regulation (EU) 2016/61 of 10 October 2014 and its amendment (EU) 2018/1620 of 13 July 2018 that lay down rules that specify in detail the liquidity coverage requirement
  - Commission Implementing Regulation (EU) 2016/322 of 10 February 2016 laying down implementing technical standards with regard to supervisory reporting of institutions of the liquidity coverage requirement.

- with reference to the disclosure information to be published:
  - CRR Article 435 which defines the disclosure requirements for each separate category of risk, including the key ratios (letter f);
  - EDTF (“Enhanced Disclosure Task Force”) recommendation No.4 that requires the disclosure of key ratios (included LCR), once the applicable rules are finalized;
  - EBA Guidelines 2017/01, published in March 2017 and applicable from 31 December 2017 relating to the full set of LCR disclosure.

Therefore, disclosure is made according to the EBA guidelines mentioned above.

The Liquidity Coverage Ratio is calculated in according to the Commission Implementing Regulation (EU) 2016/322 applied from 1 October 2016.

Qualitative information which complements the "EU LIQ1 - LCR disclosure template"

Funding Concentration Risk can arise when the bank leverages on such a limited number of funding sources, that they become of such significance that the withdrawal of one or few could trigger liquidity problems.

In UniCredit Bank Austria AG, the governance and control of funding concentration risk is mainly performed through the setting and monitoring of metrics – managerial and regulatory - aimed at preventing potential vulnerabilities in the bank's ability to meet its liquidity obligations; such as the concentration by products and counterparties.

Regarding potential collateral calls, monthly reporting is conducted to measure the impact in terms of additionally required collateral that the bank may be required to provide given a downgrade of its own credit rating, relevant rating agencies are considered.

As far as the currency mismatch is concerned, a regular monitoring of the relevant currencies and related liquid assets and net cash outflows is performed. So far, only EUR and USD resulted to be relevant at bank level. Assessment performed on potential currency mismatches between liquid assets and net outflows shows that the liquidity surplus in EUR is sufficient to cover the gap in USD. A buffer of HQLA (high-quality liquid assets) in USD was built up, aiming to partially cover the net cash flows and has been maintained to face the potential risk related with the conversion of the currency.

At the end of December 2021, **liquidity buffer** components mainly consist of reserves held at Central Bank (cash and deposits, in the amount of € 21 billion). The other eligible component is mostly made up of central government assets and public financial institutions in total amounting to a total of about € 5 billion.

The main component of the net liquidity outflows is related with retail and corporate deposits and the potential cash outflows related with the committed and uncommitted credit lines.

Qualitative disclosure as at 31 December 2021

Disclosure of credit risk mitigation techniques (Art. 453 CRR)

UniCredit Bank Austria AG („Bank Austria") has been authorized by Austrian Financial Market Authority (FMA) and the Austrian National Bank (OeNB) to use its own estimates for volatility adjustments (comprehensive method) for credit risk mitigation techniques. This permission was given without limitation.

Qualitative disclosure as of 31 December 2021

In accordance with the "Revised Framework of International Convergence of Capital Measures and Rules" (Basel), Bank Austria is firmly committed to satisfying the requirements for recognition of Credit Risk Mitigation (hereafter "CRM") techniques for regulatory capital purposes, according to the approach adopted (Advanced IRB).

Bank Austria has acknowledged the regulatory requirement with specific internal Guidelines issued locally and by the Holding Company, in compliance with the Regulation (EU) No 575/2013 of the European Parliament and of the Council of 26 June 2013 on prudential requirements for credit institutions and investment firms (CRR) and Regulation (EU) No. 876/2019 of 20 Mai 2019 (amending Regulation (EU) No 575/2013)

Such Guidelines pursue several objectives:

- to encourage collateral and guarantees optimal management;
- to maximize the mitigating effect of collateral and guarantees on defaulted loans;
- to attain positive effect on Group capital requirements, ensuring that local CRM practices meet minimum "Basel" requirements;
- to define general rules for eligibility, valuation, monitoring and management of collateral (funded protection) and guarantees (unfunded protection) and to detail special rules and requirements for specific collateral/guarantees.

Credit Risk mitigations are accepted only to support loans and they cannot serve as a substitute for the borrower's ability to meet its obligations. For this reason they have to be evaluated in the credit application along with the assessment of the creditworthiness and the repayment capacity of the borrower, emphasizing the importance of the "legal certainty" requirement for all collaterals and guarantees, as well as their suitability.

Bank Austria put in place all necessary actions in order to:

- fulfill the respect of any contractual and legal requirements, and take all steps necessary to ensure the enforceability of the collateral/guarantee arrangements under the applicable law;
- conduct sufficient legal review confirming the enforceability of the collateral/guarantee arrangements on the parties and in the relevant jurisdictions.

Such a review is repeated as necessary to ensure the enforceability of the security interest over the entire term of the underlying collateralized loan exposure. Furthermore, attention is always paid to the adequacy of a collateral agreement. Adequate collateralization by way of physical collateral and guarantee or surety exists if it is consistent with the underlying credit exposure and there are no relevant risks vis-à-vis the collateral provider.

In general, strict internal instructions and procedures are in place to ensure the formal enforceability of any physical collateral and guarantee or surety taken.

Collateral management assessments and Credit Risk Mitigation compliance verifications are performed specifically as part of the wider process of internal validation on rating.

Policies and processes for on- and off-balance sheet netting

In general, netting agreements on balance sheet of reciprocal credit exposures between the Bank and its counterparty are considered eligible if they are legally effective and enforceable in all relevant jurisdictions, including in the event of default or bankruptcy of counterparty, and if they meet the following operational conditions:

- provide for the netting of gains and losses on transactions cleared under the master agreement so that a single net amount is owed by one party to the other;
- fulfil the minimum requirements for recognition of financial collateral (valuation requirements and monitoring).

In general, Bank Austria apply netting agreements only if they are able at any time to determine the position netting value (assets and liabilities with the same counterparty that are subject to the netting agreement), monitoring and controlling debts, credit and netting value.

Netting instruments are mainly used for OTC derivatives, repos and securities lending transactions where the counterparties are – generally – Financial Institutions. The primary objective of the bank is to cover with netting agreements as many as possible transactions in order to reduce utilization of credit lines and to release the amount of required regulatory capital. In this regard, a special Global Policy (“Counterparty Credit Risk Governance") has been issued aiming at defining an efficient and comprehensive framework for collateral management in order to safeguard the bank from avoidable risk-taking.

The effectiveness of a collateral agreement of each individual counterparty relationship depends on the selection of appropriate assets qualifying as eligible collateral. Certain collateral types may present inherent risks related to the price volatility, the liquidity and the settlement of the asset. In addition, the collateral assets must be assessed in the context of the collateral providing counterparty (double default risk). The mentioned policy details the eligibility criteria for both OTC derivatives and Repo/securities Lending Transactions, and defines the requirements in terms of documentations, requiring, as a general base, market standard agreements such as ISDA Master Agreement, Global Master Repurchase Agreement or European Master Agreement.

Policies and processes for collateral evaluation and management

Bank Austria has implemented a clear and robust system for managing the credit risk mitigation techniques, governing the entire process for evaluation, monitoring and management of collaterals.

The assessment of the collateral value is based on the current market price or the estimated amount which the underlying asset could reasonably be liquidated for (i.e. pledged financial instrument or mortgaged real estate fair value).

For financial instruments, valuation methods are different depending on their type:

- securities listed on a recognized stock exchange, are evaluated according to the market price (the price of the most recent trading session);
- securities not listed on a recognized stock exchange, have to be based on pricing models based on market data;
- undertakings for Collective Investments and mutual funds are based on the price for the units that are publicly quoted daily.

The market price of pledged securities is adjusted by applying haircuts for market price and /or foreign exchange volatility, according to regulatory requirements.

In case of currency mismatch between the credit facility and the collateral, an additional haircut is applied.

Possible mismatches between the maturity of the exposure and that of the collateral are also considered in the adjusted collateral value.

The current models in place are based on internally estimated haircuts. The methodological approach provides that the hedging value has to be estimated for each financial instrument on the basis of its market value (i.e. mark-to-market) adjusted with a haircut that has to consider the intrinsic riskiness according to the different factors (price risk, time of ownership and liquidity risk).

Bank Austria is provided with a tool for the automatic evaluation of the mark- to- market of the pledged securities, granting the constant monitoring of the financial collateral values.

For the valuation of real estate collateral, specific processes and procedures ensure that the property is evaluated by an independent appraiser. In Bank Austria systems for the periodic monitoring and revaluation of the real estate collateral, based on statistical methods, adopting internal databases or provided by external info-providers, are in place.

Other types of collateral (such as a pledge of movable assets) are subject to specific prudential haircuts. Monitoring activities strictly depend on the collateral characteristics. In general pledges on goods are treated with caution.

Description of the main types of collateral taken

The collateral accepted in support of credit lines primarily includes real estate, both residential and commercial and financial instruments collateral, including debt securities, equities, and units of Undertakings for Collective Investment in Transferable Securities (UCITS). The remaining part includes pledges on other assets (e.g. rental/leasing rights) and other collaterals (e.g. pledged goods).

However, in order to be considered eligible for risk mitigation, the general requirements according to Supervisory Regulations must be met, along with the specific requirements for the approach adopted for purposes of calculating regulatory capital for the individual counterparty/exposure (Standardized, F-IRB, A-IRB), in accordance with the legal framework of the country in scope.

The UC Holding Company provides specific guidelines for the eligibility of all kind of collaterals and each Legal Entity shall define the list of eligible collateral, according to Group methods and procedures and in compliance with local legal and supervisory requirements and peculiarities.

Main types of guarantors and credit derivative counterparties and their creditworthiness

Personal guarantees can be accepted as module complementary and accessory to the granting of loans, for which the risk mitigation serves as additional security for repayment.

At portfolio level, personal guarantees are provided by banks, government, central banks and other public entities and others. The last category includes the personal guarantees provided by natural persons, whose eligibility for CRM depends on the specific approach.

Credit derivative protection providers are mainly banks and institutional counterparties.

The list of eligible protection providers depends on the specific approach, Bank Austria recognize guarantees provided if the relevant minimum requirements are satisfied and that the protection provider risk profile can be evaluated at the time that the guarantee is established and over its entire duration.

Before a personal guarantee is accepted, the protection provider (or the protection seller in case of credit default swap) has to be assessed in order to measure his/her creditworthiness and risk profile. The hedging effect of guarantees/credit derivatives for the purpose of credit protection depends basically on the creditworthiness of the protection provider which is assessed during the credit underwriting phase.

Information about market or credit risk concentrations of the used credit risk mitigation instruments

Concentration risk occurs when the major part of collateral financial assets (at portfolio level) is concentrated in a small number of collateral types, protection instruments, or specific providers of collaterals or sectors or when there is lack of proportion in the volume of collaterals taken.

Such concentration is monitored and controlled by the following processes/mechanisms:

- In case of personal guarantees/credit derivatives, a contingent liability (indirect risk) is charged to the protection provider. In the evaluation of the credit application, a secondary commitment is added to the guarantor and it is reflected in the guarantor’s total credit exposure as deemed competent and approved in accordance with the bank’s system of authority;
- In case the protection provider, directly or indirectly, is a Central Bank or a Sovereign, a specific credit limit has to be instructed and, if the guarantor is a foreign subject, a country limit must be obtained, if necessary.

EU CR3 – CRM techniques overview (Art. 453 CRR)

(EUR million)

		Unsecured carrying amount	Secured carrying amount	of which secured by collateral	of which secured by financial guarantees	of which secured by credit derivatives
		a	b	c	d	e
1	Loans and advances	65,290.4	32,301.1	25,289.1	7,011.9	0.0

The table illustrates the effect of Credit Derivatives on IRB approach capital requirements' calculation, comparing RWA before and after Credit Derivatives mitigation.

In Bank Austria, there is no effect from such mitigation techniques on RWA under the IRB approach.

EU CR7-A – IRB approach – Disclosure of the extent of the use of CRM techniques (Art. 453 CRR)

A-IRB		Total exposures	Credit risk Mitigation techniques											Credit risk Mitigation methods in the calculation of RWEAs	
			Funded credit Protection (FCP)									Unfunded credit Protection (UFCP)		RWEA without substitution effects (reduction effects only)	RWEA with substitution effects (both reduction and sustitution effects)
			Part of exposures covered by Financial Collaterals (%)	Part of exposures covered by Other eligible collaterals (%)	Part of exposures covered by Immovable property Collaterals (%)	Part of exposures covered by Receivables (%)	Part of exposures covered by Other physical collateral (%)	Part of exposures covered by Other funded credit protection (%)	Part of exposures covered by Cash on deposit (%)	Part of exposures covered by Life insurance policies (%)	Part of exposures covered by Instruments held by a third party (%)	Part of exposures covered by Guarantees (%)	Part of exposures covered by Credit Derivatives (%)
